

In recent years, some European and American scientists have found that the South Pole ice layer melting will speed up, creating the swift and violent rise of sea water. After completing satellite monitoring, analysis and research, an Italian scientific magazine reported that scientists believe in the past ten years global warming has become more serious further south. The melting of the polar icecaps has caused separation from the original ice layer body and the unceasing drift to the sea of the ice water.

Global warming is causing the icebergs to melt and the reduction of the polar region area. The South Pole's Master Penguin bears the brunt of this. The International South Pole observation station scientists have discovered that the Ardleigh penguins have already slowly begun to migrate to places in higher latitudes, because the higher temperature and changes to the thin South Pole landmass have already made these South Pole inhabitants homeless.

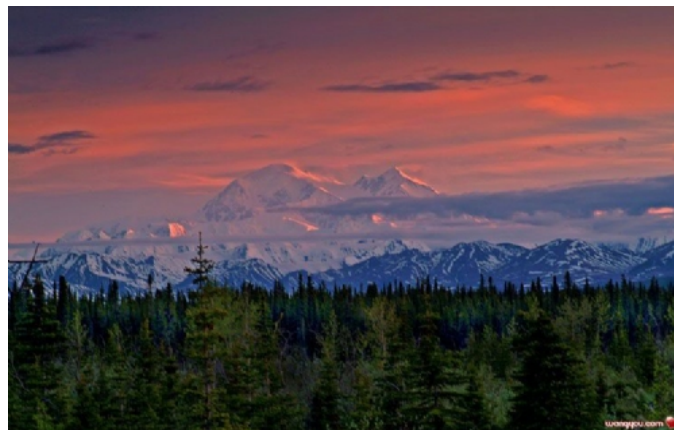

Not only is the South Pole receiving the destruction, but also the North Pole. Nowadays, there is only a fragmentary glacier left over the from the North Pole icebergs. Because the game sea lion has been moving north for a long time along with the glacier, polar bears are unexpectedly starving to death. This shocking evidence repeatedly confirms that the Earth's temperature is becoming warmer.

The sea ice surface is extremely important to the wild animals. For example, take the seal as the main food for polar bears, who catch the seal on the ice surface. Female seals also usually give birth to the seal baby on the ice surface. But as the arctic climate has become warmer, and the sea-level ice vanishes, the survival of the polar bear and other North Pole wild animals is directly threatened.

The protection of the environment protects humanity. Nobody hoped to one day see a world which is submerged. The iceberg melting is only one problem. We hope that through a joint effort, we can protect the icebergs, protect the North Pole and South Pole's animals, protect the Earth, and let the judgment day never arrive.

THE END
