

# Assessing, Planning and Securing Technology Compliance

## Information Security Services from CCAT

### Be ready for NIST 800 – 171

The new federal standard is in effect and defense and aerospace manufacturers are working to achieve compliance with DFAR 252.204-7012 by the December 31st deadline. Do you know how the new standard impacts your company? CCAT works with hundreds of clients helping them align their technology to their business strategy while keeping them compliant with critical standards like DFARs, NIST, ITAR, and SSAE16. More than just consultants, CCAT's IT team and Certified Export Control Officers are ready to get projects done to move your company into compliance.

### Documented Policies and Procedures and an Action Plan

To become compliant by December 31st, companies need to have an Action Plan in place. CCAT can review your systems in a matter of a few weeks, looking closely at your technology infrastructure, policies, processes, and applications to assess gaps between current practices and the federal standards. The Action Plan and customized Policies and Procedures are presented with specific action items and organized with budget and time estimates. CCAT has one of the largest teams of technologists in Connecticut who can get compliance projects done on time and within tight budgets.

### Help you maintain compliance

Ongoing monitoring and analysis are federal requirements as they are critical to ensuring continued security and compliance. CCAT employs a 24/7 security operations center, sophisticated security monitoring software, and experts who understand the critical nature of defense aerospace operations and technology. When issues are discovered, CCAT has the team that reacts quickly - minimizing damage and getting you back to business.
